

A New Room for William

Fiction

William stood in the middle of his new bedroom. The bare walls stared back at him. In his old room, the walls were covered in pictures. He turned to look out of the window. He could see a big tree at the end of the garden. In his old garden, there had been a climbing frame. A boy appeared at the window of the house next door. He waved at William. William ducked down below the windowsill.

The next day, Mum and William went shopping for wallpaper. William wanted the same as he had in his old room, but they didn't have it. William walked around the shop slowly. Suddenly, he stopped. There, on the shelf, was the most amazing wallpaper he had ever seen. It was covered in dinosaurs. "That one, Mum!" he said.

"Can we have that one?"

When they went home, William put the wallpaper roll in the corner of his empty room. Then he started to unpack the boxes in his room. He found his model dinosaurs and placed them carefully on the windowsill. The boy next door appeared again. This time, William gave a small wave back.

The next morning, William woke up early. Today was the day the decorating would begin. He was too excited to stay in bed, so he went downstairs and out into the garden. He stomped along the path. "GRRR, I'm a fierce dinosaur!" he growled.

"RARRR! I'm an even fiercer dinosaur!" came a voice from the tree.

William looked up. The boy from next door was sitting in the branches. "I'm Tom," said the boy. "I live next door. This is our tree – it goes from your garden into mine."

"I'm William," said William. He looked at Tom's garden. There was a climbing frame.

They played together all morning. When Mum called William in for lunch, he raced inside. "Come and see your room!" said Mum. William ran upstairs. The walls were covered in dinosaurs. "It's brilliant!" he said.

That night, William lay in bed, looking at his wallpaper. The moonlight shone through the curtains and made the T-rex look like it was chasing the Stegosaurus right across the wall. William smiled and closed his eyes.
